# BUSINESS CONTINUITY SOLUTIONS

**YOU CAN'T PREDICT THE NEXT CRISIS, BUT YOU CAN BE PREPARED FOR IT.**

## Empowering Workforce Productivity

Business disruptions can impact organizations of any size in any location. From weather, to power outages, political events or even virus outbreaks, every organization needs to develop a business continuity plan to ensure its business operations can continue, no matter the disruption.

At Gerab System Solutions, we help you meet the ever-changing needs of your workforce with ease. You choose the deployment that works best for your business—as a cloud service, on-premises or hybrid model. Employees get the same secure, high-definition experience across operating systems and networks. With Citrix Virtual Apps and Desktops service, leverage your preferred cloud provider—Microsoft, AWS or Google—to migrate workloads and onboard new users at the pace that works best for your business.

These experts are also prepared to teach you all you need to know and answer questions you might have.

Aligned with GSS's best in industry products and experts, we can provide a complete solution to protect your data and business applications end-to-end.

- Flexibility for recovering data, applications and virtual machines from any platform.
- Effective recovery point and time objectives (RPOs/RTOs) easily aligned with SLAs.
- Protect data against latest threats.
- Fastest Recovery through secure, single and scalable solutions.
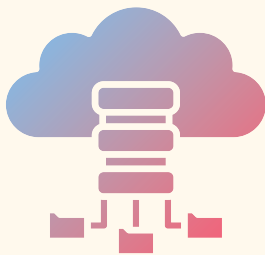

It is essential that the backup plan runs regularly along with the backup on data and servers. Our **Backup Solutions** cover data backup plans to address issues, such as identifying systems and data that lack backup support, keeping the confidentiality of the data, and comprehensive recovery procedure, etc.
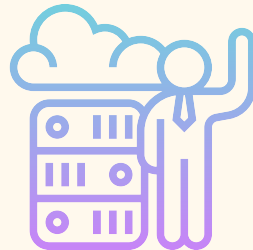

***IT  infrastructure or IT backup and recovery*** procedure is also a vital part of our Business continuity and disaster recovery solutions. The solutions covers details of software and hardware systems at an accessible location along with the recovery process, and off-site data storage plan.

**Business Risk Assessment** is another important component for disaster recovery plan is business risk assessment for IT infrastructure responsible for maintenance, management and data storage, etc. This meticulous assessment determines the significance of data repositories and define a recovery plan for every manager.
